

First exercise

- Create a new gradle project in IntelliJ
- Enable kotlin
- Update the gradle version with:
 - `./gradlew wrapper --gradle-version 4.7` (Needed for the spring-boot plugin)
- Include the needed plugins (Remember the classpath dependencies)
 - apply **plugin: 'kotlin'**
 - apply **plugin: 'kotlin-spring'**
 - apply **plugin: 'org.springframework.boot'**
 - apply **plugin: 'io.spring.dependency-management'**
- Include the needed dependencies (You can lookup these in the example project)
 - `basic_rest_controlle`
- Provide the following endpoints
 - **/api/messages** (returns all messages for the requesting user -> Basic Auth)
 - **/api/account** (returns the account information for the requesting user)
